STUDY ON THE GEOMAGNETIC EFFECT OF THE
F₂ LAYER. [1962] [13p. 5 refs.]

Order from SLA \$1.60

62-14060

Trans. of Zeitschrift für Geophysik (West Germany)
1954, v. 20, p. 75-83.DESCRIPTORS: *Terrestrial magnetism, *Ionosphere,
*Geophysics, Magnetic properties, Analysis.

The influence of the earthmagnetic field on the world-wide distribution of the critical frequencies f_oF_2 is examined especially for solstices by means of observations in 1952. At solstice as at equinox both maxima in geomagnetic latitudes of about $\pm 20^\circ$ and intermediate minimum upon the geomagnetic equator are absent in the early forenoon. The highest critical frequencies are appearing upon the magnetic equator. At noon the minimum is to be found about inclination zero; the two (Earth Sciences--Atmosphere, TT, v. 10, no. 2)

SIMULTANEOUS FLUCTUATIONS OF THE F2
LAYER IONIZATION IN TWO OBSERVATION STA-
TIONS VERY DISTANT FROM ONE ANOTHER, tr. by
J. M. Sprenger. 9 Feb 61 [7]p. 4 refs.
Order from OIS or SLA \$1.10 62-23843

Trans. of reprint of mono. [Gleichzeitige Schwankungen
der F2 Schicht Ionisation in Zwei Weit Voneinander
Entfernten Beobachtungsstationen] Graz, 1955.

DESCRIPTORS: *Ionosphere, Ionospheric disturbances,
*Ionization, Statistical functions, Statistical analysis.

The simultaneous appearance of short time ionization
fluctuations of F2 layers that are a great distance apart
could be proved by a series of measurements that were
taken in the same month (January, 1953) in Graz and in
Cape Town. Actually, high correlation values (up to
 $r = 0.725$) were only obtained for recorded observa-
(Earth Sciences--Atmosphere, TT, v. 9, no. 9) (over)
